

Teach Programming CIC

Teach Programming is a community interest company we founded to enable more young people, especially girls, to experience the beauty of programming.

VALUES & CONTEXT SEE VIDEO - LINK

- * How we teach
 - * Students work towards **building real things** that they can show their friends and family
 - * **Relate** concepts to their interests e.g. web development over command line
 - * Keeping core concepts in **simple** and concise lessons
 - * Allowing students to put their own **creativity** into their programs e.g. making their own emoji

We like to think of it as we're teaching children to build modern day go karts!

- * How we're learning
 - * improving our practices
 - * extending our educational influence
